                                                                          send
                                                                                                                                                                      SUBCELLULAR LOCATION: Integral membrane protein. TISSUE SPECIFICITY: FOUND IN PROMYELOCYTIC CELLS. PTM: SULFATION CONTRIBUTES TO THE EFFICIENCY OF H PTM: MODIFIED BY O-LINKED GLYCOSYLATION, BUT NOT GLYCOSYLATION.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUP
                                                                                                                                                                                                                                         FUNCTION: RECEPTOR FOR A C-C TYPE CHEMOKINE. BINDS TO MIP-1-ALPHA MIP-1-BETA AND RANTES AND SUBSEQUENTLY TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL. MAY PLAY A ROLE IN THE CONTROL OF GRANULOCYTIC LINEAGE PROLIFERATION OR DIFFERENTIATION. ACTS AS CO-RECEPTOR WITH CD4 FOR PRIMARY NON-SYNCYTIUM-INDUCING STRAINS (NSI) (MACROPHAGE-TROPIC) OF HIV-1 VIRUS. IT PROMOTES ENV-MEDIATED FUSION OF THE VIRUS.
                                                                                                                        European Bioinformatics Institute.

MO1. Biol. Evol. 16:1145-1154(1999).

-!- FUNCTION: RECEPTOR FOR A C-C TYPE CHEMOKINE. BINDS TO MIP-1 MIP-1-BETA AND RANTES AND SUBSEQUENTLY TRANSDUCES A SIGNAL INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL. MAY PLAY A IN THE CONTROL OF GRANULOCYTIC LINEAGE PROLIFERATION OR
                                                                                                                                                                          DIFFERENTIATION.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS
                                                                                  ween the Swiss Institute of Bioinformatics Institute.

Submitted (JAN-1997) to the EMBL/GenBank/DBJ databases.

Submitted (JAN-1997) to the EMBL/GenBank/DBJ databases.

1. FUNCTION: RECEPTOR FOR A C-C TYPE CHEMOKINE. BINDS TO MIP-1-BETA AND RANTES AND SUBSEQUENTLY TRANSDUCES A SI INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL.

1. SUBCELLULAR LOCATION: Integral membrane protein.

1. TISSUE SPECIFICITY: DETECTED IN MONOCYTE/MACROPHAGE CE BUT NOT IN NONHEMATOPOIETIC CELL LINES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A.

BINDS TO MIP-1-ALPHA. MIP-1-BETA AND RANTES AND SUBSEQUENTLY TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR CALCIUM IONS LEVEL. SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                 181

score gree
and is don
   d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq
